

The architecture (20140210)

History

Previously we were able to record, modify, removed, the pictures in the album. We could put youtube link. Administrative regarding IP addresses and add google id.

Now in 20140210

We can add google id according to the version of google map version. We don't remove any previous id except if it is the same version. See below...

ADMINISTRATION DES GROUPES/ADRESSES IP ADMINISTRATION OF GROUPS/IP ADDRESSES

Google

Google ID or trip name(no=Google ID by default):

☐ok ☒no

Youtube

not

New update 20140306

As a matter of fact it is difficult to read the menus. A new feature was added to the administration menu. Yes, The section now gets a new option. Follow a trip. You can add a trip name, remove it and, gets its URL to trace it. It is not complex to create it but it involves extra feature that HTML 4 does not have. HTML 5 was used to fulfill this feature. Calendars for the begin of the trip and the end are provided. This feature does not work well on all browsers. It was fully operational with Opera. Demos are done with Version 11.64 Build 1403 Platform Mac OS X System 10.6.8. Here a menu:

URL

Some menus can be improved. The one with the list for instance.

Structure: It is a simple file with the begin and, the end of the trip date. The file name is the name of the trip. All the trips are in one specific directory. When the trip is recorded during the trip, in the DB there is a field that contains the trip name. Hence the program that draw on the map will take the appropriate trip name and draw it. Many users at the same time can have their own trips.
