

## **Weather forecast service**

Interesting thing is getting weather forecast by zip code city name,...

Here is the listing (one example) of website that can give weather forecast:

<http://stackoverflow.com/questions/951839/api-to-get-weather-based-on-longitude-and-latitude-coordinates>

Something interesting is that it is even better with geolocation. Well here is the website that can do that:

<http://www.google.com/ig/api?weather=,,,50500000,30500000>
